Application No.:

-3-

IN THE CLAIMS

Please cancel claim 10 without prejudice. Please amend claims 3, 4 and 9 (marked up version attached in Appendix), such that pending claims 1-9 are as follows:

- 1. An accelerator comprising a plurality of accelerating cells arranged to convey a beam, adjacent cells being linked by a coupling cell, the coupling cells being arranged to dictate the ratio of electric field in the respective adjacent accelerating cells, at least one coupling cell being variable to allow a range of ratios including positive values and negative values.
- 2. An accelerator according to claim 1 in which the at least one coupling cell is variable smoothly from a positive value to a negative value.
- 3. (Amended) An accelerator according to claim 1, in which the beam is relativistic over substantially the length of the accelerator.
- 4. (Amended) An accelerator according to claim 1, in which the variable coupling cell comprises a cavity containing a conductive element rotatable about an axis transverse to the beam axis.
- 5.————The use of an accelerator in which-a-plurality-of-accelerating-cells are arranged——
 to convey a beam, and adjacent cells are linked by a coupling cell, the coupling cells being arranged
 to dictate the ratio of electric field in the respective adjacent accelerating cells, at least one coupling
 cell being variable to allow a range of ratios including positive values and negative values.
- 6. Use according to claim 5 in which the at least one coupling cell is variable smoothly from a positive value to a negative value.
- 7. An operating method for an accelerator in which a plurality of accelerating cells are arranged to convey a beam, and adjacent cells are linked by a coupling cell, the coupling cells being
